

RAS Storage

STORAGE SYSTEMS

Your Multibend-Center keeps bending while the pallets are changed.

The new **RAS Storage system** automatically supplies the machine with blanks. The compact storage tower saves floor space, and the loading robot requires **no programming or teaching**.

This makes **kit production** easier and gives you full flexibility in the processing sequence.

6

pallets in the compact storage tower

1 to 4

stacks per pallet

0

programming time for the loading robot

Pallet change

without interrupting the bending process

Kit production

all blanks of a kit in one run

Less floor space

thanks to the compact storage tower

Flexibility

adapt the processing sequence as needed

Storage and loading in one system

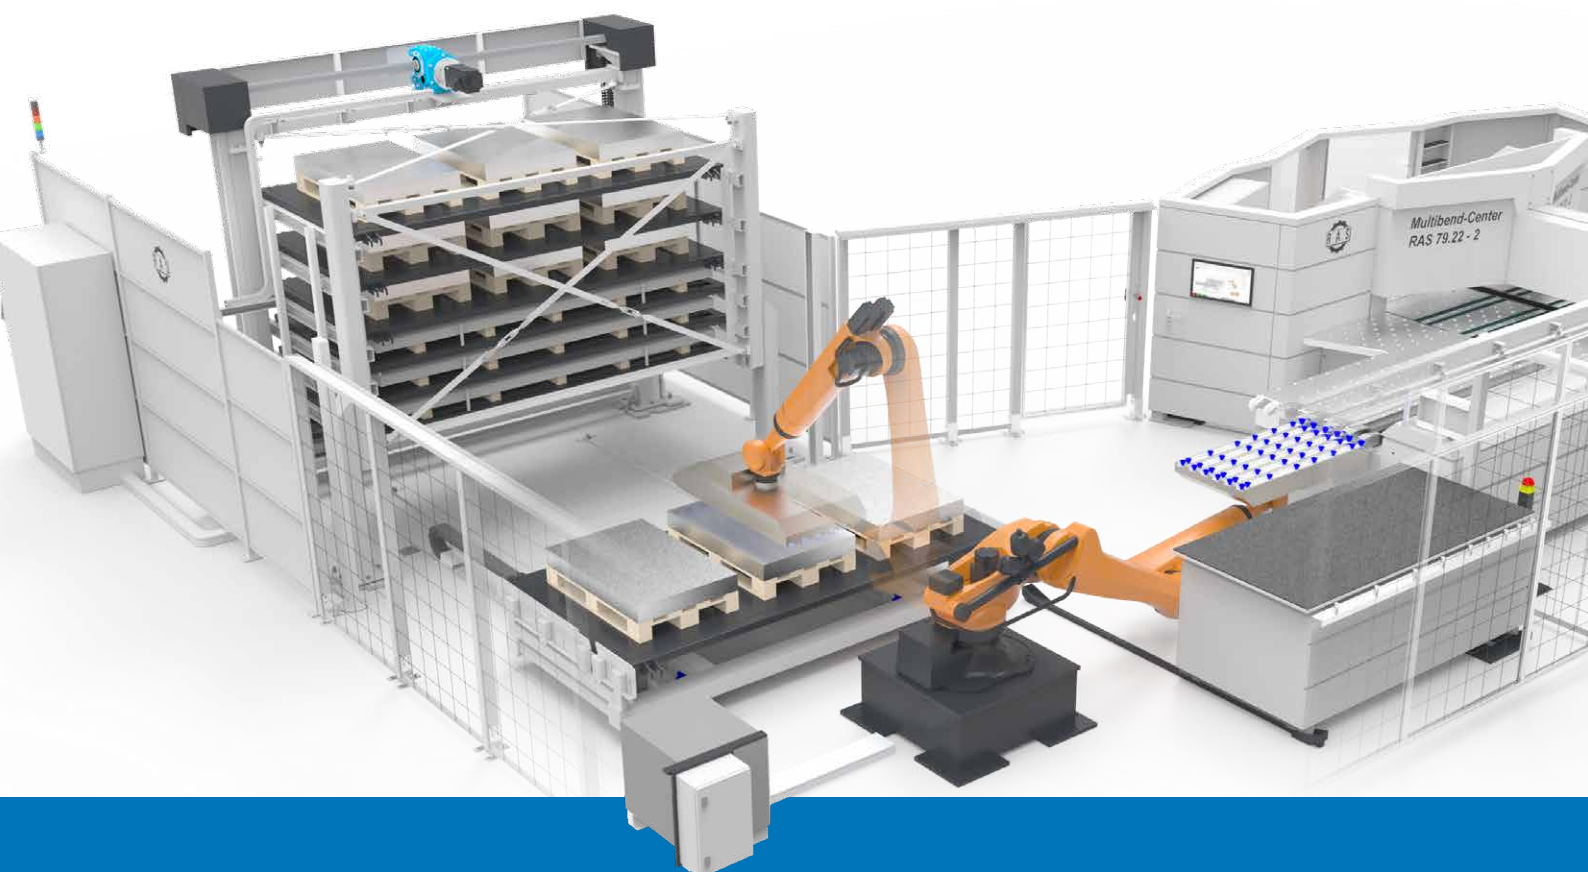

STORAGE

- Compact storage tower with **6 pallets**
- Blanks can be placed **directly on the pallet**
- 1 to 4 stacks per pallet
- Also compatible with Euro and industrial pallets

LOADING AT THE MULTIBEND-CENTER

- The loading robot requires **no programming or teaching**
- It **rotates** the blank during loading
- It **flips** the blank during loading: the visible side faces up on the pallet and down for bending
- If the blanks do not need to be flipped, the **shuttle table** supports loading
- Optional **automatic unloading**

Version with blank infeed

Your Multibend-Center keeps bending during pallet changes, making your production with RAS Storage even more economical.
